

Automatic filter

AF 179 S

with external pressure cleaning and integrated cyclone effect
Nominal diameter DN 100, 125, 150, 200

1. Features

Filtration Group automatic backflush filters are suitable for all applications where low or medium-viscosity liquids have to be filtered.

These compact, inline filter systems are designed for automatic cleaning. The system is cleaned by rotating the filter cartridge and backflushing with external or internal pressure media.

Advantages:

- Low lifecycle costs because no filter material is consumed
- Cleaning without interrupting filtration
- Precise separation quality in accordance with the surface filter principle
- Top-quality, asymmetric filter medium made of multiple-sintered stainless steel fleece on a rugged core element
- Efficient filter cleaning assures maximum process stability
- Solid construction and high-quality materials for a long service life
- Minimal liquid loss during cleaning
- Filter cleaned one segment at a time with a high backflush pulse
- Actual filter rating and nominal separation are indicated
- Integrated preseparation thanks to tangential inflow and preseparator tube
- Material variants open up a wide range of applications (also for high abrasive media)
- Modular Filtration Group Vario system for optimum filter selection
- Optional: Gas-tight shaft seals available
- Optional: Application in Ex zone 1 and 2
- Optional: Certification for Pressure Equipment Directive (PED)
- Optional: Acceptance for ASME U-Stamp
- Easy maintenance
- Worldwide distribution

2. Operating principle

The Filtration Group AF 179 S backflush filter belongs to the large Vario series. The compact Filtration Group automatic filter system is used for fine and micro-filtration of a variety of low-viscosity liquids.

This inline pressure filter consumes no filter material, which means there is also no need for subsequent disposal. The filter is cleaned without interrupting operation. The concentrated solids are drained off simply by opening the system for a short time.

The medium to be cleaned is guided into the filter housing under pressure. It flows inward through the Filtration Group segmented element. Particles settle on the surface of the filter medium. The filtered fluid exits the filter housing at the top opposite the inlet connection.

The integrated preseparator relieves the load on the segmented element, particularly from coarse and heavy particles. This permits a tangential flow around the preseparator tube and the deflection edges. The filter is cleaned when a preset differential pressure limit, a set interval or a defined filtered fluid quantity is reached.

The segmented element is turned as the cleaning and external pressure valves are opened. The segments are then guided one at a time past the pressure channel housing on the inside and the backflush channel on the outside. This causes them to open and close alternately. The integrated external pressure accumulator is pretensioned during closing, so that when one segment opens, an outward surge cleans the separated particles from the filter material. As a result of this pulse cleaning principle, the particles are catapulted out, collected in the backflush channel and discharged almost entirely with external medium. One turn suffices to clean all segments.

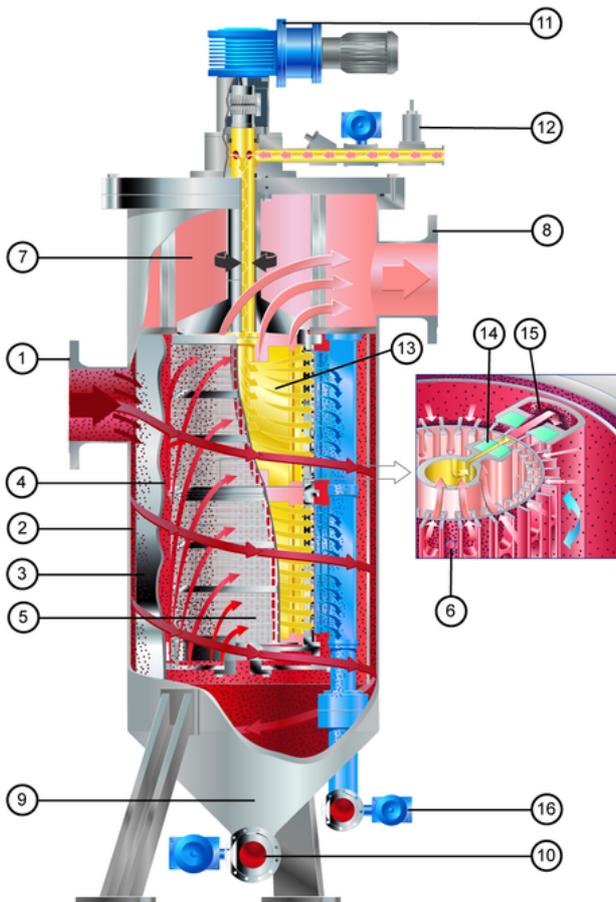

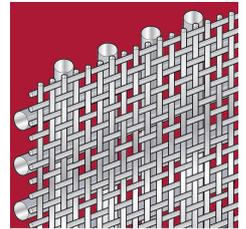

The residue that has settled in the collection cone can be emptied via the drain valve either when the machine is at a standstill or during filtration.

All filters in the Filtration Group Vario series are protected by various patents.

Used Filtration Group filter cartridges in the AF 179 S backflush filter:

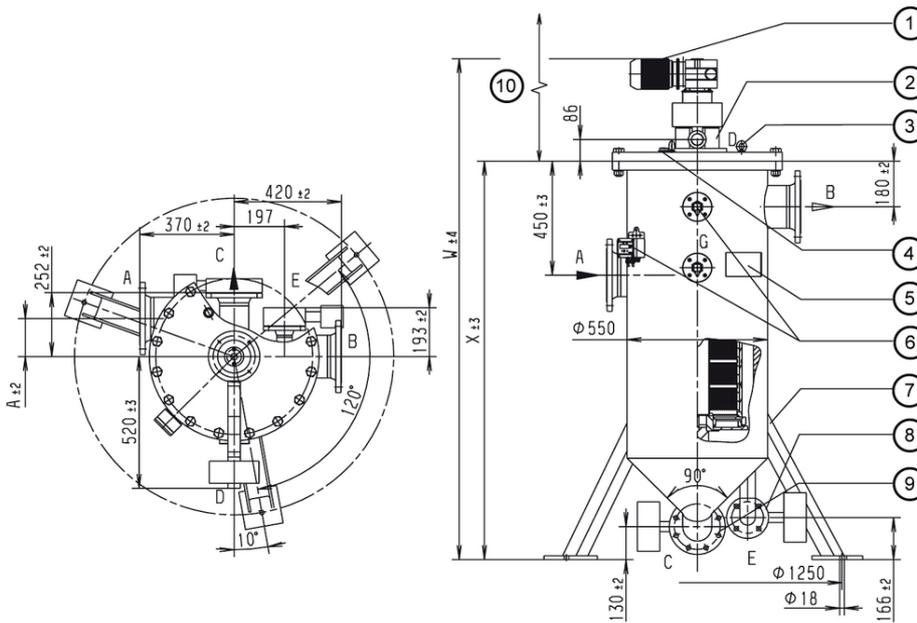

Filtration Group topmesh cartridges (standard):

- Good cleanability due to asymmetric design
- Large effective filter surface
- Defined particle retention
- Several material combinations possible

- 1 Inlet connection
- 2 Outer inlet plenum
- 3 Preseparator tube
- 4 Inner inlet plenum
- 5 Filtration Group segmented element
- 6 Filtration Group filter material
- 7 Plenum for filtered fluid
- 8 Outlet connection for filtered fluid
- 9 Residue collection cone
- 10 Drain valve
- 11 Drive motor
- 12 External pressure connection, external pressure and backflush valves and gauge P_f
- 13 External pressure accumulator
- 14 External pressure nozzle
- 15 Backflush channel (outside)
- 16 Cleaning valve (P3 control throttle)

3. Technical data

- 1 Cleaning drive: can be mounted turned 90°, 180° or 270°
- 2 Optional: Automatic external pressure valve
- 3 Lifting eyebolts
- 4 Vent screw G1
- 5 Name-plate
- 6 Optional: Differential pressure indicator with differential pressure transmitter G1
- 7 Feet (3 x 120°)
- 8 Optional: Automatic backflush valve
- 9 Optional: Drain valve, manual or automatic mode
- 10 Clearance required Z in mm

Filter data

Max. operating pressure 10 bar

Max. operating temperature: 100 °C

Materials:

- Housing and cover: St. 1.4571
- Internals: St. 1.4571/A2
- Bearing bushes: PTFE based
- Seals: FPM (Viton)
- Coiled cartridge: St. 1.4571 or 1.4571/A1 (Δp max. 6 bar)

Cover fastening:

- 16x M24 hexagon screws
- 16x M24 hexagon nuts

Connections and nominal diameters:

- A-inlet, B-outlet: DN100, DN125, DN150, DN200
- C-drain: DN50
- D-external pressure: G1 1/2
- E-backflush: DN50
- G-indicator: DN25
- All threaded holes acc. to DIN 3852 X
- flanges acc. to EN 1092-1/11B1/PN 40

Drive shaft seal: Lip seal with O-ring

Outside coating: Synthetic resin primer, blue acc. to RAL 6007

Other types available on request!

 AF 17916.. Filter surface x 4

Cleaning and emptying

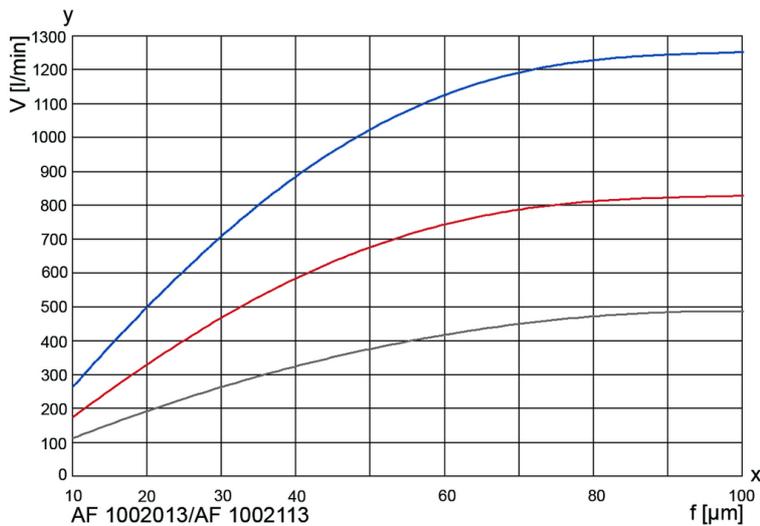

Fully automatic operation

Filtration usually takes place under pressure. The filter is cleaned after a programmed time or a preset number of cycles or according to the differential pressure. We recommend cleaning the system at a differential pressure of approximately 0.5 to 0.7 bar. The cleaning motor is operated for around 14 s (about one turn of the filter cartridge). The external pressure and cleaning valves remain open for this period. This suffices to clean the filter thoroughly. The drain valve is opened in order to empty the filter. Depending on the residue concentration, this can either take place directly after cleaning or be time or cycle controlled. The opening time of the drain valve is 2 to 3 s.

Refer to the Instruction Manual for further information

Filtration Group's team of specialists will be pleased to assist in any way. Tests can be carried out in the absence of reliable evaluation criteria.

5. Efficiency curves

The curves indicate the volume flow through the complete filter system (filter housing including cartridge) and are referred to a differential pressure of 0.3 bar. Specific process information is essential to guarantee reliable operation of an automatic filter.

Viscosity in mm²/s

-  1 mm²/s
-  33 mm²/s
-  100 mm²/s

y = Volume flow V [l/min]

x = Gap width f [μm]

6. Type number key

Type number key with selection example for AF 179143-711-53660/S4

Size

AF 17912	1 x 300x350	No. of steps x diameter x length [mm]
AF 17913	2 x 300x350	No. of steps x diameter x length [mm]
AF 17915	3 x 300x350	No. of steps x diameter x length [mm]
AF 17916	4 x 300x350	No. of steps x diameter x length [mm]

Cleaning drive

- 3** Gear motor 230/400 V, 50 Hz or 266/460 V, 60 Hz
- 4** Gear motor 230/400 V, 50 Hz Ex II 2G T3

Inlet and outlet connections

- 6** DN100
- 7** DN125
- 8** DN150
- 9** DN200

Permissible operating pressure in bar (housing/cover)

- 1** PN10

Material Seal FPM, bearing PTFE

- 1** Standard; aluminium, nodular cast iron; steel
- 2** Stainless steel 1.4571/1.4581
- 3** Standard; steel, internals stainless steel 1.4301/1.4571

Differential pressure indicator and gauge

- 5** PiS 3175, digital Δp gauge, 2 pressure transmitters settable from 0 to 16 bar

Valves and control throttles

- 3** External pressure valve for liquid, 24 V G1½
- 4** External pressure valve for liquid, 230 V G1½
- 8** Like 3 but with P3 control throttle and P3 gauge
- 9** Like 4 but with P3 control throttle and P3 gauge

Drain valve

- 2** Ball valve, electropneumatic 24 V DC
- 3** Ball valve, electropneumatic 230 V AC
- 4** Ball valve, electric 24 V DC
- 5** Ball valve, electric 230 V AC

Cleaning valve

- 6** Flap, electropneumatic 24 V/10 bar
- 7** Flap, electropneumatic 230 V/10 bar
- 8** Flap, electric 24 V/10 bar
- 9** Flap, electric 230 V/10 bar
